Sumatera Utara

Final year D3 Computer Technology student at Institut Teknologi Del, specializing in full-stack web development, Internet of Things (IoT), and Cloud Computing. Experienced in building web-based systems using ReactJS, CodeIgniter, Laravel, and PHP, with hands-on exposure to cloud environments and IoT integration using MQTT, Node-RED, and Grafana. Proven ability to develop end-to-end solutions from hardware prototyping to software deployment through academic research and a professional internship at PT Angkasa Pura Indonesia. Active in campus organizations, demonstrating strong communication, teamwork, and leadership skills that support effective collaboration in project-based environments.

Education

**Institut Teknologi Del - Jl. Sisingamangaraja Sitoluama-Laguboti. Toba Samosir
22381. Sumatera Utara-Indonesia**

Aug 2023 - Sep 2026 (Expected)

Diploma in Computer Technology, 3.27/4.00

Work Experience

PT Angkasa Pura Indonesia - Tangerang, Indonesia

Feb 2026 - Jun 2026

Full-Stack Web Developer Intern (IT Non-Public Services)

PT Angkasa Pura Indonesia is a state-owned enterprise (BUMN) responsible for managing and operating more than 30 airports across Indonesia, including Soekarno-Hatta International Airport.

- Designed and developed TAKAH, a web-based Document Digitalization and Entry System using CodeIgniter 4, PHP, and MySQL, featuring multi-role approval flow, digital signature, file upload/download, e-archiving, and relational database design for complex document management
- Built Tonella, a web-based maintenance monitoring dashboard using CodeIgniter 3 and AJAX, enabling real-time tracking of printer and laptop maintenance status with interactive charts and downloadable reporting features
- Developed Banner Posko Application, a digital signage system supporting image banners and YouTube URL embedding with scheduled activation/deactivation, real-time auto-status hooks, and an admin panel for display customization
- Enhanced functionality of multiple internal web systems for the IT Non-Public Services Unit, ensuring reliability and alignment with operational needs across all developed platforms

Institut Teknologi Del - Laguboti, Indonesia

Aug 2025 - Jan 2026

Student Researcher – IoT Systems Developer

Institut Teknologi Del is a technology-focused higher education institution in North Sumatra, Indonesia, committed to producing innovative engineers through research and applied technology.

- Developed a full-stack IoT application using Flutter and PHP integrated with MQTT, Node-RED, and Grafana for real-time monitoring, automated control, and dashboard visualization of coffee fermentation parameters
- Designed and assembled custom PCB hardware with pH and temperature sensors, implementing an end-to-end system from hardware prototyping to software deployment for a coffee fermentation optimization research project

Organisational Experience

Student Executive Board (BEM) – Del Institute of Technology - Del Institute of Technology

Aug 2024 - Jan 2026

Visual Division, Department of Religion and Social Affairs

BEM is a student organization that acts as a student representative, coordinating various social, religious, and student development activities at the Del Institute of Technology.

- Create visual designs for the Department of Religious Affairs and Social Affairs activities, including posters, banners, and event promotional materials and Support the team in conveying information about social and religious activities in a creative and engaging manner. Coordinate with department members to ensure visual materials align with the event concept and theme.

Student Leadership Program - Sitoluama, Laguboti, Toba, North Sumatra, Indonesia

Aug 2024 - Sep 2025

Leadership

Participant – Leadership, Communication, and Organizational Development Track

- Completed an intensive leadership development program covering communication, decision-making, conflict resolution, and ethical leadership through workshops, simulations, and peer evaluations
- Collaborated with diverse student groups to design and execute community initiatives, while engaging in mentoring sessions with senior leaders and faculty advisors to strengthen leadership and self-management skills

Skills, Achievements & Other Experience

- **Final Project I** (2026): Developed and deployed a full-stack IoT Monitoring & Control System (Final Thesis) covering end-to-end implementation from hardware assembly (PCB design, pH and temperature sensors) to software development using Flutter, MQTT, Node-RED, Grafana, and MySQL for real-time monitoring and automated control
- **Projects** (2025): Developed an IoT-based Coffee Fermentation Monitoring and Control System integrating pH and temperature sensors for real-time process optimization
- **Projects** (2024): Developed "IJABU" Coffee Shop Website, a responsive e-commerce platform using Laravel, PHP, JavaScript, and Bootstrap with order, delivery, and feedback features
- **Projects** (2024): Built a Smart Dispenser System using Arduino and ultrasonic sensors for automated liquid dispensing with real-time LCD monitoring
- **Projects** (2023): Developed a RESTful API using PHP OOP integrated with external public APIs, improving data access speed and delivering structured endpoints
- **Software**: JavaScript, ReactJS, Laravel, CodeIgniter, PHP, Python, C, SQL, HTML, MySQL, MongoDB, Docker, Kubernetes, Linux, Git, Cisco Packet Tracer, Arduino IDE, Microsoft Office Suite
- **Hardware**: Raspberry Pi, ESP32, Arduino (Uno & Mega), Various Sensors and Actuators
